

IN THE CLAIMS:

Please note that the claims presented include amendments previously entered under Article 19. Further amendment of the claims as presented below is respectfully requested.

1. (Currently amended) ~~A Use of a~~ composition for the protection of a shaped article against corrosion comprising:

(a) a polyisobutene having a glass transition temperature of less than -20°C and surface tension of less than 40 mN/m at a temperature above the glass transition temperature of said polyisobutene,

(b) a filler material, and

(c) an anti-oxidant composition, wherein said anti-oxidant composition comprises a primary and a secondary anti-oxidant, the primary anti-oxidant being selected from the group consisting of sterically hindered phenol compounds, provided that the sterically hindered phenol compound is not 2,6-di-*t*-butyl-4-methylphenol;

~~for the protection of a shaped article against corrosion.~~

2. (Currently amended) The Use composition according to claim 1, wherein the sterically hindered phenol compound comprises at least two sterically hindered phenol groups.

3. (Currently amended) The Use composition according to claim[[s]] 1 ~~or 2~~, wherein the secondary anti-oxidant is selected from the group consisting of phosphites and thioesters.

4. (Currently amended) The Use composition according to ~~any one of~~ claim[[s]] 1[[3]], wherein the anti-oxidant composition further comprises a lactone.

5. (Canceled)

6. (Currently amended) A Wrapping wrapping tape for the protection of a shaped article against corrosion, wherein the wrapping tape comprises:

(a) a first layer comprising a film, said film comprising a polymer or a copolymer of one or more α -olefins and/or diolefins, and

(b) a second layer comprising the composition according to ~~any one of claim~~[[s]] 1[[
5]].

7. (Currently amended) A Proceess process for the manufacturing of a wrapping tape for the protection of a shaped article against corrosion according to claim 6, comprising laminating onto a film wherein a composition according to ~~any one of claim 1~~[[
-5]] ~~is laminated onto a film~~, said film comprising a polymer or a copolymer of one of more α -olefins and/or diolefins.

8. (Currently amended) A shaped article having protection from corrosion comprising the composition according to any one of claims 1-5 or comprising a shaped article having a surface and the wrapping tape according to claim 6, wherein the wrapping tape covers at least a portion of the surface of the shaped article or comprising the wrapping tape obtainable by the process according to claim 7.

9. (Currently amended) The Shaped shaped article according to claim 9 8, wherein the shaped article is an oil line, or gas line, or pipe.

10. (Currently amended) A Process method for the protection of a shaped article against corrosion comprising:

(a) providing a shaped article having a surface; and

(b) for covering a at least a portion of the surface of the shaped article with a first layer of wrapping tape, wherein the wrapping tape comprises:

(i) a first layer comprising a film, said film comprising a polymer or a copolymer of one or more α -olefins and/or diolefins, and

(ii) a second layer comprising the composition according to ~~any one of~~ claim[[s]] 1[[-5]].

11. (Currently amended) The Process method according to claim 10, further comprising cleaning wherein the surface of the shaped article is cleaned to a St-w level according to NEN-EN-ISO Standard 8501-1 prior to ~~application of~~ covering with the wrapping tape.

12. (Currently amended) The Process method according to claim 10 ~~or claim 11, wherein the comprising overlapping the first layer of wrapping tape is wrapped~~ around the shaped article ~~such that with another subsequent layer[[s]] of the wrapping tape overlap each other.~~

13. (Currently amended) The Process method according to ~~any one of~~ claim 10[[-12]], ~~wherein after the further comprising wrapping tape has been applied, an outerwrap film is wrapped~~ around the shaped article.

14. (Currently amended) The ~~Process~~ method according to claim 13, wherein the outerwrap film ~~is selected from films comprising~~ comprises one or more polyolefins.
15. (Currently amended) The ~~Process~~ method according to claim 14, wherein the polyolefin is selected from the group consisting of ethylene homopolymers, ethylene copolymers, ethylene vinylchloride copolymers, and ethylene vinylacetate copolymers.
16. (New) The composition according to claim 2, wherein the secondary anti-oxidant is selected from the group consisting of fosfites and thioesters.
17. (New) The composition according to claim 16, wherein the anti-oxidant composition further comprises a lactone.
18. (New) The wrapping tape according to claim 6, wherein the sterically hindered phenol compound comprises at least two sterically hindered phenol groups.
19. (New) The wrapping tape according to claim 6, wherein the secondary anti-oxidant is selected from the group consisting of fosfites and thioesters.
20. (New) The wrapping tape according to claim 6, wherein the anti-oxidant composition further comprises a lactone.
